

Which Working Practices Have Become Preferred Practices During the Previous Decade?

Please answer the question for two perspectives:

1. By looking at a large organization/company or a system like health services
2. By looking at a team you work(ed) for or the practices you apply yourself

For each perspective, how many times have you selected the left and the right column?

Important: One choice per row

1.	<input type="radio"/> Split complex challenges into parts.	<input type="radio"/> When the challenge is complex, apply self-organization.
2.	<input type="radio"/> Use linear processes (step by step; if the situation is X, then do Y).	<input type="radio"/> Create natural process flows (like roundabouts on the road have replaced rigid traffic lights).
3.	<input type="radio"/> Management and experts provide the decisions to make (via directions, rules, standards, processes, and IT applications).	<input type="radio"/> People have the freedom to make decisions for the situation at hand.
4.	<input type="radio"/> Build on what you have.	<input type="radio"/> Stop doing what does not work.
5.	<input type="radio"/> Define what you are talking about.	<input type="radio"/> Use patterns: everybody can have a somewhat different view.
6.	<input type="radio"/> Demonstrate short-term action when problems occur.	<input type="radio"/> Resolve problems at their root cause(s).
7.	<input type="radio"/> When there is insufficient compliance: Enforce compliance with best practices, processes, strategies, and standards.	<input type="radio"/> Give people the freedom to do what makes business sense
